Voice Generation Prompt : Generate a 30-year-old male voice speaking joyfully by the seaside:
'When I was a child, I always loved running barefoot on this beach.'
Prompt
Scores
Speech Signal
(a) Generate Initial Scheduling Policy
Input
Prompt Analysis:
① Decompose the prompt into multi-dimensional voice generation tasks
② Use COT to Derive latent acoustic elements through scene inference
Prompt Segmentation:
Identity : {age : 30; gender: male;}
Emotional:{emo: happy; speed: slow}
Background Audio:{Seaside} →[COT]→ →{Waves + Seagulls}
Assign Tasks
ID prompt
EMO prompt
BG prompt
(b) Conditioned Speech Synthesis & Rendering
Calculate Scores
Obtain Confidence Score & Evaluation Metric
$\Delta conf_{ID}$
$\Delta conf_{EMO}$
ΔWER
$\Delta NMOS$
Audio Selection Initialization
(c) Optimize Scheduling Policy
Directed cost graph over modular speech outputs
State Transition & Cost Calculation
